¡Alta Decoración!

🇪🇸 PINTURA PLÁSTICA MONOCAPA

Pintura plástica muy cubriente para trabajos de decoración, acabados en tonos vivos y pastel, en interiores y exteriores. Sirve para pintar y decorar superficies de yeso, escayola, cemento, hormigón, etc. Impermeable, no amarillea, lavable, no contiene disolventes, producto no inflamable, no perjudica la piel.

Sobre superficies de cemento y hormigón, tanto en interior como exterior, se aplicará una primera capa diluida al 20-25% de agua para obtener una profunda penetración en la superficie pintada y dejar ésta bien sellada. A continuación aplicar una segunda mano diluida entre un 15%-20% de agua para dejar el acabado perfecto.

Sobre superficies de escayola o yesos, es aconsejable preparar la superficie con un Fijador Sellador o con la misma pintura muy diluida. A continuación, aplicaremos dos manos de pintura diluida con un 15-20% de agua.

Sobre superficies en mal estado, se deberá de sanear las zonas afectadas, eliminando y sellando el material que no esté bien adherido a la superficie, limpiando el polvo o suciedad que pudiera contener.

Remove the content until its total homogenization.

Apply with a brush, roller or airless gun.

It is recommended not to apply at extreme temperatures, neither below 6°C, nor on surfaces exposed to high insolation.

Surfaces to be painted must be clean, dry and free from either oil or detached materials.

Do not apply when rain is expected in the next hours.

Protect the cans from cold temperatures.

🇬🇧 ONE-COAT PLASTIC PAINT

It is a plastic paint with great covering power, obtaining light or pastel finishes in both interior and exterior.

It can be used to paint and decorate surfaces of plaster, cement, concrete, etc.

This is a waterproof product that does not yellow, it is perfectly washable. This paint does not contain solvents, so it is not flammable. The same way, it is harmless to the skin.

Over concrete or cement surfaces, both in interior or exterior, we will apply a first coat diluted with 20-25% of water, in order to obtain a deep penetration on the surfaces, sealing them perfectly. Then, we will apply a second coat diluted with 15-20% of water, obtaining this way a perfect finish.

Over plaster surfaces, it is advisable to prepare the surfaces by using a fixer or sealer, or by applying a much diluted coat of the same paint. Then, we will apply two coats of paint diluted with 15-20% of water.

Over surfaces in bad condition, we must clean the damaged areas, sealing or removing the detached materials, to subsequently remove the dust that can be contained on the surface.

Stir the product until it is thoroughly mixed.

Apply it with an appropriate brush, roller or painting gun.

It is advisable not to apply in extreme temperatures, neither below 6°C nor extremely sun-exposed surfaces.

Surfaces to be painted must be clean, dry and free from either oil or detached materials.

Do not apply when rain is expected in the next hours.

Protect the cans from cold temperatures.
